Skills

Languages: Portuguese: Native ·
English: Proficient

Frontend: Typescript · React · Next.js
· Tailwind CSS · HTML

Backend & Data: Node.js ·
PostgreSQL · Supabase

DevOps & Testing: Playwright ·
Typecheck · ESLint · GitLab CI/CD

AI & Design: Cursor · Figma · Stitch ·
Ollama

Professional Experience

Full-Stack Developer
Self-Employed · Lisbon

02/2025 - Present

- Architected and delivered 4 end-to-end projects from system design to production, using TypeScript, JavaScript, React, Next.js, Node.js, REST APIs, automated testing with Playwright, CI/CD pipelines using Gitlab, and cloud deployment on Vercel. Owned UI design, frontend development, backend integration, testing, release automation, and production delivery.
- Developed O Guardanapo, a multilingual menu management platform that helps store owners create and update daily menus, manage detailed product information, and clearly surface allergens and dietary restrictions for local and foreign customers.
- Established comprehensive CI/CD pipelines across all projects in GitLab and GitHub, configured for automated testing, linting, and type checking workflows and introduced a pipeline self-fix job, decreasing the time taken for cleaning and debugging by ~99%.
- Leveraged GitLab Pages to run most of the applications built and configured custom local runners to run the projects pipelines, resulting in a ~95% cost saving in operational costs.
- Established coding standards, project structure guidelines, and development workflows, project context easy to pick up and understand by humans and LLMs

Full-Stack Developer
EdgenAI · Lisbon

11/2023 - 02/2025

- Designed and developed 2 full-stack applications and 3 MVPs with React and Node.js, using local LLM servers, supporting 100+ employees at SIBS using the apps daily.
- Made Edgen Chat, a ChatGPT-like web app with document upload, RAG-based retrieval, and integration with a local LLM inference API.
- Built Edgen Translate, an LLM-powered document translation app for DOCX/PDF files, focusing on text extraction, formatting preservation, and translation workflow UX.
- Produced interactive UI prototypes in Figma, minimising user testing cycles by 20% and coordinated their implementation with the backend team for a smooth team workflow.
- Designed secure APIs for processing sensitive data using Node.js, Python (FastAPI), and Rust (Axum), reducing data processing latency by 40%

Education and Formation

Faculdade de Ciências e Tecnologia da Universidade Nova de Lisboa | Integrated Masters

Computer Engineering · Graduation: 11/2023

- Erasmus at Northumbria University
